DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12 October 2005 has been entered.

Response to Arguments

Applicant's arguments with respect to claims 2-5 and 8-10 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 3761

Claims 2-5 and 8-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Ahmed et al. (6,534,572).

Ahmed discloses a superabsorbent material, as described in column 3, lines 30-40, with odor control properties, as described in column 10, lines 11-13, containing a lactide, as described in column 7, lines 55-56. The lactide is present in an amount of 10% with respect to the total weight, as disclosed in column 8, lines 20-24. The superabsorbent material is present in an amount of 70% with respect to the total weight, as disclosed in column 11, lines 25-27. The lactide is therefore present in an amount of about 14% with respect to the weight of the superabsorbent material. The lactide is homogenously mixed within the superabsorbent material, as disclosed in column 14, lines 1-16. The superabsorbent material containing the lactide is comprised in a diaper, as disclosed in column 1, lines 15-18.
